Geographical codes used in the publications of the Cesa

Ahmet Ömer Koçak Muhabbet Kemal ¹

Abstract: Geographical codes used in the publications of the Cesa. *Cesa News* 135: 1-40.
In this paper, totally 6907 geographical codes used in the publications of the Cesa are listed.
Coverage areas of the codes, their composing and functions are explained.
Keywords: Code, geography, world, fauna, bibliography, mapping.

The codes used in the Cesa publications have been privately created at the beginning of the year 2000, and the coding idea has been improved to this day. In the present paper, more than 6900 localities, regions, or states are encoded and listed. This list is the most comprehensive one, used in the biogeographical works published up to now. In the publications of the Cesa² these codes have been widely used in the database files of the authors especially after 2000.

Coverage areas of the codes

Faunistical studies: The authors published various faunal lists of the Pterygota orders of the Old World countries at intermediate stages. Faunistical studies are collected under two major groups in the separate database files, *i.e.*, Lepidoptera, and other pterygot orders. All such publications have been based upon the codes selected in the related database files of the authors.

Bibliographical studies: Similarly, the authors published various bibliographical lists of the Pterygota orders of the Old World countries at intermediate stages. Geographic interests of such publications have been based upon the codes.

Mapping of the species of the ptergot orders: For this purpose, the same codes have been used by using special mapping programs.

² <http://www.cesa-tr.org/Infos.htm>

A large numbers of the faunistical and bibliographical works have been published by the authors so far, by using these codes. Also numerous maps have been prepared and published especially in the last years. The publications may be examples on this matter (see References, pp. 39-40).

Composing codes and their functionalities

The codes created are for the case-sensitive programs, and composed of usually 2 - 4 alphanumeric characters, rarely more than four. Codes of the states are also seen in the international usage. For examples, **AF** (Afghanistan), **BG** (Bulgaria), **BH** (Bahrain), **BO** (Bolivia), **BR** (Brazil), **CA** (Canada), **US** (United States of America), etc. For the provinces of Turkey, the numbers between 01 and 81 are used here, as they are also official codes. For examples, **01** (Adana), **02** (Adıyaman), **03** (Aydın), **04** (Ağrı), **05** (Amasya), **06** (Ankara), etc. The district codes begin with the provincial numbers. Examples for Ankara province are as follows; **06A** (Altındağ), **06B** (Ayaş), **06C** (Bala), etc. The codes of the collecting localities within a district are also created under the same way of thinking. For example, **06Ab** (Karacaören), **06Bd** (Başbükür), **06Cb** (Beynam village), etc. Sometimes, different codes are also created for different habitats, or minor localities of the main studying place. For example, **65A** (Bahçeşarayı), **65Ac** (Liman), **65Ac1** (Liman village, 1900m), **65Ac2** (Liman upper height, 2200m), **65Ac3** (Liman, Spindaran (Kavaklık [=Populetum]) 2320m), etc. Here, the code **65Ac** works also as a collective/common one together with the subsequent three minor studying sites. Similarly, provincial codes of Turkey work also as a collective/common code of the related districts, the code of Turkey (**TR**) works as a collective/common code of all the provinces, districts, and the collecting sites.

List of the codes used in the Cesa publications

In the following list, the codes are given alphabetically, according to their states. If available the geographical coordinates are also added.

1. AET Africa Continent	32. Frh Farah (AF)	59. Nks Nuksan Pass (Bd Hk AF)	89. AL Albania
